Software Project Information File

2. REVISION HISTORY

[illegible]

Software Project Information File

3. PURPOSE

The Software Project Information File (SPIF) is used to determine the location of the Software Project Repository and other important artifacts.

4. SCOPE

This document is to be referred to when creating or modifying software development projects.

5. SOFTWARE PROJECT REPOSITORY LOCATION

Description: The working code is stored in our GitHub repository. Additional code that this project inherited may be found inside our Raspberry Pi's file storage.

Location: GitHub: <https://github.com/shariliendor/SoundGarden.git>

Login: See project manager or project technical lead

6. Project Members

Developer: Diana Alvarado

Developer: Chester Gardner

Developer: Charlie Laursen

7. REFERENCES

Our project utilizes:

python_weather: <https://python-weather.readthedocs.io/en/latest/>

Matplotlib.pyplot: https://matplotlib.org/3.5.3/api/_as_gen/matplotlib.pyplot.html

FluidSynth: <https://www.fluidsynth.org/>

8. DOCUMENTS and LOCATION

Software Project Information File (SPIF)

File Name: Software_Project_Information_File.docx

File Location: GitHub: <https://github.com/NCSS/Messenger>

Software Requirements Specification

File Name: Software_Requirements_Specification.docx

File Location:

Software Project Information File

Software Technical Specification

File Name: Software_Technical_Specification.docx

File Location:

Software System Test Plan

File Name: Software_System_Test_Plan.docx

File Location:

Build Automation User Manual

File Name: Build_Automation_User_Manual.docx

File Location:

9. CODING STANDARD

The project is being developed using Python. We have not defined any project-specific coding standards.

PEP 8 Python Style Guide: <https://peps.python.org/pep-0008/>

10. SOFTWARE BUILD INSTRUCTIONS

Required Build Tools

Build Files:

Build Instructions:

First, ensure that the proper hardware configuration is present. The Raspberry Pi should be on, the electrodes should be attached to a plant, and the electrode wiring should be properly connected to the Raspberry Pi. Gain remote access of the Raspberry Pi. We use TigerVNC.

From the Raspberry Pi, run 'source soundGardenVENV/bin/activate' and then 'python main.py' [SUBJECT TO CHANGE] using the terminal.
